Worksheet: Buffer
Name
$\overline{\text { Last }}$ first

1. Define: Buffer solution
2. How will the pH of a buffer solution change if we add a small amount of water? (increase, decrease, or remain the same)
3. Consider the table given below, write a balanced chemical equation for any reaction taking place between solute particles. Then write the formulas of the major particles present (just as you would for a net-ionic equation) in each of the following solutions below. Decide on which of the solutions below would show a buffer action.

|  | Particles <br> present | Is it a <br> buffer? (Yes <br> or No) |
| :--- | :--- | :--- |
| $\mathrm{Na} 2 \mathrm{SO} 3^{\text {KHSO4 }}$ |  |  |
| NaF |  |  |
