

MAYA NUMBER SYSTEM

The Numbers:

				
1	2	3	4	5
				
6	7	8	9	10
				
11	12	13	14	15
				
16	17	18	19	0

How They Work:

The Mayan system is known as **vigesimal** (powers of 20), as opposed to our **decimal** system based on powers of 10. Below are two numbers expressed in powers of 20: $20^2 = 400$; $20^1 = 20$; $20^0 = 1$. Unlike our number system, Mayan numbers are arranged vertically. Each box represents a different power of 20, with the lowest place ($20^0 = 1$) at the bottom.

	$= 14 \times 20^2 (400) = 5600$		$= 14 \times 20^2 (400) = 5600$
	$= 4 \times 20^1 (20) = 80$		$= 4 \times 20^1 (20) = 80$
	$= 0 \times 20^0 (1) = 0$		$= 2 \times 20^0 (1) = 2$
	5680		5682

For *normal* counting, the Maya used the following system:

$$\begin{array}{l} \bullet \\ \hline \hline \end{array} \quad 11 \times 20^3 = 11 \times 8000 = 88,000$$

$$\hline \quad 5 \times 20^2 = \quad 5 \times 400 = 2000$$

$$\text{○} \quad 0 \times 20^1 = \quad 0 \times 20 = 0$$

$$\begin{array}{l} \bullet \bullet \bullet \\ \hline \end{array} \quad 8 \times 20^0 = \quad 8 \times 1 = 8$$

Sum = 90,008

Any number can be constructed this way. For larger numbers, just keep going with powers of 20. For example, anything larger than 19×8000 you can go to another place mark, $20^4 = 160,000$.

Note how we do it in powers of 10:

$$\begin{array}{l} 9 \times 10^4 = 9 \times 10,000 = 90,000 \\ 0 \times 10^3 = \quad 0 \times 1000 = 0 \\ 0 \times 10^2 = \quad 0 \times 100 = 0 \\ 0 \times 10 = \quad 0 \times 10 = 0 \\ 8 \times 10^0 = \quad 8 \times 1 = 8 \end{array}$$

Sum = 90,008

When counting *time*, the system was slightly different. In this case the third place, instead of being **400** (20^2) became **360**. Clearly this was to make it easier to incorporate the solar cycle. Thus to write a date like 2000 (the Maya obviously didn't use our calendar, but let's pretend), they would write,

$$\hline \quad 5 \times 360 = 1800 \text{ (Note: this would be } 5 \times 400 \text{ in the normal counting system)}$$

$$\begin{array}{l} \hline \hline \end{array} \quad 10 \times 20 = 200$$

$$\text{○} \quad 0 \times 1 = 0$$

Sum = 2,000
