

MATH 60 Elementary Algebra

4.0 Unit Non-Transferable Course

Why this course: You should enroll in Math 60 if you need more practice on complicated linear equations and are not familiar with quadratic equations. It is a first course in algebra; as such, you will learn first degree equations and inequalities, graphing, factoring, linear systems of equations in two variables, polynomials, rational expressions (contains fractions involving x), and exponents and square roots.

What you should already know:

- Arithmetic (adding, subtracting, multiplying, and dividing integers, fractions, and decimals)
- Basic algebra (basic expressions and linear equations)

What will be challenging:

- Solving linear equations involving more than two steps
- Solving expressions and equations containing fractions

To meet these challenges:

- Spend 10 to 12 hours a week completing homework and studying for the course
- Visit the Instructor's Office hours
- Utilize the Math Tutors in the Math Success Center
