

UDOIT: KNOW YOUR NUMBER

Every Canvas course at Cerritos College has access to UDOIT; a Canvas feature that helps you identify changes needed to make your course content more accessible. UDOIT scans your course, identifies common accessibility issues, and provides guidance to help you make changes to improve your course's accessibility.

Our college goal is for every faculty to raise their course UDOIT score to **over 90% by the end of Fall 2026**. That means every faculty member has a role to play.

Throughout the semester, the DE Team and CTX will provide regular tips, resources, and support to help you identify and fix accessibility issues in your courses. We'll help you learn how to improve your UDOIT score, one fix at a time.

But for now, your homework is simple:

Go to UDOIT & KNOW YOUR NUMBER

Once you know your course's current score, you'll have a starting point for the accessibility work this semester.

ACCESSING UDOIT

Open your course in Canvas and select **UDOIT** on the course navigation. If your account needs to be refreshed, please do so and authorize UDOIT to access your course. Then, scan your course and select **Home** to view your results.

The screenshot displays the UDOIT interface. At the top, there is a navigation bar with 'UDOIT', 'Home', 'UFIXIT', and 'Review Course Files'. A red box highlights the 'Home' button. Below the navigation bar, the main content area shows a 'Scorecard' with a '22%' Course Accessibility Score. A red box highlights the '22%' score, and another red box points to it with the text 'Course Accessibility Score'. To the right of the scorecard, there is a 'Scan Your Course' button, which is also highlighted with a red box. Below the 'Scan Your Course' button, there is a 'Scan Now' button, which is also highlighted with a red box. The interface also includes a 'Let's Improve Accessibility!' section with a brief explanation of UDOIT's purpose. On the right side, there is a 'Ways to Get Started' section with links to 'Easiest to fix', 'High Impact Issues', 'By issue type', and 'By impact type'.
